“If there is a ‘secret of life’, it is here we must look for it, among the causes which bring about the arrangement of innumerable separate processes into a single harmonious living organism.”

— C. H. Waddington

Education

Florida Atlantic University <i>Ph.D. Complex Systems and Brain Sciences</i>	Florida, U.S. 2013–2018
University of Pennsylvania <i>M.S. Criminology</i>	Pennsylvania, U.S. 2011–2012
Peking University <i>B.S. Psychology & B.S. Pharmaceutical Sciences</i>	Beijing, China 2007–2011

Special Program.....

Santa Fe Institute <i>Complex Systems Summer School</i>	New Mexico, U.S. 2013
---	---------------------------------

Research

University of North Carolina at Chapel Hill (UNC-CH) <i>Post-Doc Research Associate</i>	North Carolina, U.S. 2021–present
---	---

Advisor: Flavio Fröhlich, Ph.D.

Description: develop new computational and experimental techniques for understanding multiscale brain dynamics in animals, humans, and clinical populations; use optogenetics and brain stimulation (non-invasive and deep-brain stimulation) to understand the causal role of brain oscillations in organizing macroscopic network dynamics and microscopic neuronal spiking, and to develop treatment for psychiatric disorders (e.g., schizophrenia, depression).

Stanford University <i>Postdoctoral Scholar</i>	California, U.S. 2019–2021
---	--------------------------------------

Faculty Sponsor: Manish Saggar, Ph.D.

Description: developed new computational techniques for modeling complex brain dynamics in two main directions. Both combine nonlinear dynamic modeling and geometric/topological analysis. Direction 1: model global brain dynamics using high-dimensional biophysical network models that are highly multistable, and found the global layout of critical points better predicts human brain functional connectivity (fMRI) than conventional local approaches. Direction 2: developed a data-driven method to recover attractors and phase transitions from simulated and human fMRI time series, which is validated with theoretical ground truth computed from a nonlinear dynamic model of the brain. The methods are currently being applied to patient data.

Mentors: Emmanuelle Tognoli, Ph.D. & J. A. Scott Kelso, Ph.D.

Committee Members: Christopher Beetle, Ph.D., Armin Fuchs, Ph.D.

Dissertation Title: The Coordination Dynamics of Multiple Agents (**Zhang**, 2018)

Dissertation Description: My dissertation reveals the dynamic principles of biological coordination between multiple interacting processes across spatiotemporal scales. It consists of an empirical component (**Zhang**, Kelso, & Tognoli, 2018), a theoretical component (**Zhang**, Beetle, Kelso, & Tognoli, 2019) and a methodological component (**Zhang**, Kalies, Kelso, & Tognoli, 2020). **Experiment:** I designed a new paradigm to study rhythmic coordination between eight people where individuals' movement frequency and network connectivity were fully manipulable; this led to the discovery of various forms of coordination and transitions at dyadic, group, and ensemble levels in a human experiment. **Theoretical modeling:** a nonlinear dynamic model was developed to capture key empirical observations at all levels and unified well-known models of small- and large-scale models of biological coordination; with further numerical and mathematical analyses, I demonstrated how multistable and metastable coordination, well understood at a small scale, led to formidable complexity at larger scales. **New computational method:** developed a computational topology tool to detect collective transitions in multifrequency coordination in the above experiment.

Other Projects: multiple human-model hybrid experiments using the “Human Dynamic Clamp” paradigm. In these experiments, humans were coupled to a dynamical system model of themselves, where manipulating model parameters resulted in changes in emotional and neural dynamics.

(2011, May 20). *Early childhood risk factors for psychopathic personality in adulthood: Findings from the mauritius child health project.* (Oral presentation, 4th biennial meeting of the Society for the Scientific Study of Psychopathy, Montreal, Canada)

Teaching

NVIDIA Deep Learning Institute (DLI) **California, U.S.**
Certified Instructor & University Ambassador 2019–present
Teach workshops on “the Fundamentals of Accelerated Computing with CUDA C/C++” at Stanford University (hosted by Stanford Research Computing Center) and University of North Carolina at Chapel Hill.

Stanford University, Brain Dynamics Lab **California, U.S.**
Instructor 2019–2020
Teach a running series of tutorials on Nonlinear Dynamics to members of the lab.

Florida Atlantic University, College of Science **Florida, U.S.**
Instructor 2016
Gave a series of lectures in the “Matlab Boot Camp” on the basics of programming, MATLAB and signal processing, for students in the College of Science.

Florida Atlantic University **Florida, U.S.**
Teaching Assistant 2013–2018
Taught undergraduate courses “Psychology”, “Biological Bases of Behavior”, and “Comparative Animal Behavior”.

Grants and Awards

- o **Helen Lyng White Fellowship**, University of North Carolina at Chapel Hill 2022
- o **Seed Grant - Foundation of Hope**, "Network Neuroscience of a Novel Brief Intervention for Stress and Depression Symptoms in College Students" (\$41,080, Co-PI with Dr. Tobias Schwippel, [link](#)) 2022
- o **Brain Institute Travel Award**, Florida Atlantic University. 2016
- o **NSF Travel Award**, Society for Social Neuroscience. (ID: 1543122; PI: Dr. Stephanie Cacioppo). 2016
- o **Graduate Fellowship of Academic Excellence**, Florida Atlantic University. 2014
- o **1-st Year Graduate Research Award**, College of Science, Florida Atlantic University. 2014

Professional Membership

- o Society for Industrial and Applied Mathematics (SIAM) 2017–Present
- o Society for Neuroscience (SfN) 2014–Present
- o American Society of Criminology (ASC) 2011–2013

Professional Service

Society for Industrial and Applied Mathematics – Student Chapter **Florida Atlantic University**
Vice President 2018-2019

Society for Industrial and Applied Mathematics – Student Chapter **Florida Atlantic University**
Secretary 2017-2018

Reviewer for journals:

PLOS Computational Biology, Frontiers in Computational Biology, Network Neuroscience, Scientific Reports, Cognitive Processing, Cognitive Systems Research, Biological Cybernetics*, International Journal of Psychophysiology*, PLoS ONE*, Physics of Life Reviews*, Psychological Science*, Journal of Neuroscience Research*. (* assisting Dr. J. A. Scott Kelso)

Reviewer for conference:

Practice & Experience in Advanced Research Computing (PEARC)

Grant reviewer for:

National Science Foundation (Perception, Action, and Cognition program).

Mentoring experience

Below is a selected list of students that I have mentored:

- Dhruvi Patel (undergraduate student, Biology, UNC-CH) 2022–present
Ferret behavior and electrophysiology data collection and analysis.
- Grace Ross (graduate student, Neuroscience, UNC-CH) 2021–present
Electrophysiology time series analyses to study posterior visual network dynamics during visual perception in ferrets.
- Lauren Sidelinger (undergraduate student, Neuroscience/Computer Science, UNC-CH) 2021–present
EEG time series analyses to study the long-term stability of resting brain dynamics.
- Preetam Tanikella (undergraduate student, Biostatistics, UNC-CH) 2021–present
Electrical and mechanical engineering for animal behavior training box.
- Noah Trexler (undergraduate student, Computer Science, UNC-CH) 2021–present
Electrical and software engineering for animal behavior training box.
- Mary Enloe (undergraduate student, Computer Science, UNC-CH) 2021
Mechanical engineering for animal behavior training box.
- Rafi Ayub (graduate student, Bio-engineering, Stanford University) 2019–2020
Biophysical network modeling of brain dynamics, assisting Dr. Manish Saggar.
- Joshua Child (graduate student, Political Sciences, Florida Atlantic University) 2018
Directed Independent Study on oscillator models of economic inequality.
- Nadine Akin (postgraduate student, Biological Sciences, Florida Atlantic University) 2017-2018
Analysis of dynamical behavioral data from a social coordination experiment.
- Ananda Chowdhury (undergraduate student, Engineering, Florida Atlantic University) 2015-2016
Signal processing, and analysis of multiagent interaction data.
- Daniela Herrera (undergraduate student, Neuroscience, Florida Atlantic University) 2015-2016
Behavioral data acquisition for multiagent coordination experiments.

Outreach

- I maintain a twitter list to promote Women in Computational Neuroscience ([link](#)).
- In 2020, I volunteered for Neuromatch 3.0 ([link](#)) as a emcee for five sessions of talks. Neuromatch 3.0 is an online unconference aiming to make neuroscience conferences more open, inclusive, and democratic.
- In 2020, I volunteered for the Neuromatch Academy ([link](#)) to help prepare lecture materials. The Neuromatch Academy is a nonprofit online school to make computational neuroscience more inclusive and diverse.
- In 2019, I joined a nonprofit organization, Women of AI ([link to website](#)), to make programming training more accessible to women interested in data science. I coordinate activities between the organization, Stanford Research Computing Center, and NVIDIA Corporation.
- In 2016, I wrote a popular science article to explain human-machine coordination to Chinese readers, entitled “Human-human coordination vs. human-machine coordination: Does it feel the same?” (in Chinese, [link to article](#))

Computational Techniques

- **Parallel Computing:** CUDA C/C++ for accelerated solutions using NVIDIA GPUs, frequently used with MATLAB mex-function for easy interface. Since 2014, I have employed CUDA-based parallel

computing techniques for various applications, including digital signal processing (Wavelet transform, $\sim 100\times$ acceleration), simulation and parameter exploration of differential equations ($\sim 1000\times$ acceleration, Zhang et al. 2019), and graph matching ($\sim 150\times$ acceleration, Zhang[†], Chowdhury[†], and Saggar *In press*). Specific acceleration factors depend on the intrinsic parallelizability of the problem.

- **Open- & Closed-Loop Data Acquisition:** I have engineered complex experimental apparatuses and software for real-time and/or closed-loop recording and modulation (e.g. Zhang et al., 2018; Zhang, Kelso, & Tognoli, *In prep*). My work relies on innovative experimental paradigms, for which proprietary hardware often lacks flexibility or lead to unacceptable latency. To build satisfactory experimental equipment, I developed a system of techniques utilizing open hardware, involving sensor engineering, printed circuit board design, micro-controller programming, and software engineering.
- **Applied Mathematics & Numerical Methods:** My work is tightly connected to the mathematics of Nonlinear Dynamics, Topology, Geometry, and associated numeric methods. By training and by practice, I have developed expertise in ordinary differential equations (Zhang et al., 2019; Zhang, Dumas, Kelso, & Tognoli, 2016; Zhang et al., *In prep*), partial differential equations (in particular, weak solutions of pattern formation problems with irregular or moving boundaries, using finite element method), stochastic differential equations (Zhang[†] et al., *In press*; Zhang, Sun, & Saggar, 2022), algebraic topology (Zhang et al., 2020), and computational geometry (Zhang[†] et al., *In press*).

Other Activities and Achievements

- **Actor/Singer** 2012
In the short musical "The Last Mummer", directed by Wally Zialcita, Philadelphia, PA
- **Internship** 2010-2011
Phase III Clinical Trial Laboratory, Pharmacy Department, Peking University Third Hospital, Beijing, China
- **Director of University Radio Station** 2008-2009
Peking University Health Science Center, Beijing, China
- **Co-founder and Co-director of Student Association of Psychology** 2007-2008
Peking University Health Science Center, Beijing, China
- **Professional Renju Player** 2005-2006
National Champion (2x; China), World Third (1x)
- **The Best Poet Award** 2005
The First Chinese Student Poetry Festival, Sichuan, China
Three award-winning poems were later published in an anthology "Soaring Youth" (2008, People's Literature Publishing House, China)
