“If there is a ‘secret of life’, it is here we must look for it, among the causes which bring about the arrangement of innumerable separate processes into a single harmonious living organism.”

— C. H. Waddington

Education

Academic Degrees.....

Florida Atlantic University <i>Ph.D. Complex Systems and Brain Sciences</i>	Florida, U.S. 2013–2018
University of Pennsylvania <i>M.S. Criminology</i>	Pennsylvania, U.S. 2011–2012
Peking University <i>B.S. Psychology & B.S. Pharmaceutical Sciences</i>	Beijing, China 2007–2011

Other Programs.....

Santa Fe Institute <i>Complex Systems Summer School</i>	New Mexico, U.S. 2013
---	---------------------------------

Research Positions

University of North Carolina at Chapel Hill <i>Post-Doc Research Associate</i>	North Carolina, U.S. 2021–present
--	---

Advisor: Flavio Fröhlich, Ph.D.

Description: continue to develop computational techniques for characterizing and modeling complex brain dynamics. The goal is to combine animal and human data to better understand multiscale rhythmic coordination in the brain.

Stanford University <i>Postdoctoral Scholar</i>	California, U.S. 2019–2021
---	--------------------------------------

Faculty Sponsor: Manish Saggar, Ph.D.

Description: develop computational techniques for analyzing and mechanistically modeling complex brain dynamics. I developed an innovative method for computing brain dynamic landscapes combining neuroimaging data and biophysical network modeling (Zhang & Saggar, 2020). The landscape-based analysis better predicts human functional connectivity than traditional numerical simulations. A computational topology/geometry method was further developed to reconstruct the network of state transitions within the dynamic landscape from simulated and real neural dynamics (Zhang, Chowdhury, & Saggar, *To be submitted*, 2019, SfN). The methods are being applied to patient neuroimaging data.

Florida Atlantic University <i>Graduate Student</i>	Florida, U.S. 2013–2018
---	-----------------------------------

Mentors: Emmanuelle Tognoli, Ph.D. & J. A. Scott Kelso, Ph.D.

Committee Members: Christopher Beetle, Ph.D., Armin Fuchs, Ph.D.

Dissertation Title: The Coordination Dynamics of Multiple Agents (Zhang, 2018)

Dissertation Description: My dissertation reveals the dynamic principles of biological coordination between multiple interacting processes across spatiotemporal scales. It consists of an empirical component (Zhang, Kelso, & Tognoli, 2018), a theoretical component (Zhang, Beetle, Kelso, & Tognoli, 2019; Zhang, Kelso, & Tognoli, *in prep-a*) and a methodological component (Zhang, Kalies, Kelso, & Tognoli, 2020). First, I designed a new experimental paradigm to study rhythmic coordination between eight people where individuals' movement frequency and network connectivity were fully manipulable (see techniques involved); this led to the discovery of various forms of coordination and transitions at dyadic, group, and ensemble levels in a human experiment (Zhang et al., 2018). Based on this experiment, I developed a mathematical model (Zhang et al., 2019) that captured key empirical observations at all levels and unified well-known models of small- and large-scale models of biological coordination; with further numerical and mathematical analyses, I demonstrated how multistable and metastable coordination, well understood at a small scale, led to formidable complexity at larger scales. A preliminary theory was proposed for classifying complex metastable patterns based on their topological types (Zhang et al., *in prep-a*; Zhang, 2018, Section 3.2.6). Further, a computational tool was developed for detecting transitions between such complex metastable patterns in real data, leveraging existing tools from computational algebraic topology (Zhang et al., 2020).

Other Projects: I conducted a separate line of research on social coordination by studying human emotional responses (Zhang, Dumas, Kelso, & Tognoli, 2016) and neural activities (Zhang, Kelso, & Tognoli, *in prep-b*; Stefanescu et al., *in prep-c*) during dyadic interaction with a socially capable Virtual Partner. The Virtual Partner's behavior is driven by a system of differential equations, allowing parametric manipulation of its "sociality" and "competitiveness"—this paradigm is named the "Human Dynamic Clamp" (Dumas, Lefebvre, Zhang, Tognoli, & Kelso, 2018).

asian females but not males. (Poster, the 63rd Annual Meeting of the American Society of Criminology, Washington, D.C.)

Raine, A., **Zhang, M.**, Appelby, S., & Venables, P. H. (2011, May 20). *Early childhood risk factors for psychopathic personality in adulthood: Findings from the mauritius child health project.* (Oral presentation, 4th biennial meeting of the Society for the Scientific Study of Psychopathy, Montreal, Canada)

Teaching

Stanford University <i>NVIDIA Deep Learning Institute (DLI) Certified Instructor & University Ambassador</i> Teach workshops on “the Fundamentals of Accelerated Computing with CUDA C/C++” at Stanford University (hosted by Stanford Research Computing Center) and other academic institutes.	California, U.S. 2019–2021
---	--------------------------------------

Stanford University, Brain Dynamics Lab <i>Instructor</i> Teach a running series of tutorials on Nonlinear Dynamics to members of the lab.	California, U.S. 2019–2020
---	--------------------------------------

Florida Atlantic University, College of Science <i>Instructor</i> Gave a series of lectures in the “Matlab Boot Camp” on the basics of programming, MATLAB and signal processing, for students in the College of Science.	Florida, U.S. 2016
--	------------------------------

Florida Atlantic University <i>Teaching Assistant</i> Taught undergraduate courses “Psychology”, “Biological Bases of Behavior”, and “Comparative Animal Behavior”.	Florida, U.S. 2013–2018
--	-----------------------------------

Awards

-
- | | |
|---|------|
| o Brain Institute Travel Award , Florida Atlantic University. | 2016 |
| o NSF Travel Award , Society for Social Neuroscience. (ID: 1543122; PI: Dr. Stephanie Cacioppo). | 2016 |
| o Graduate Fellowship of Academic Excellence , Florida Atlantic University. | 2014 |
| o 1-st Year Graduate Research Award , College of Science, Florida Atlantic University. | 2014 |

Professional Membership

-
- | | |
|---|--------------|
| o Society for Industrial and Applied Mathematics (SIAM) | 2017–Present |
| o Society for Neuroscience (SfN) | 2014–Present |
| o American Society of Criminology (ASC) | 2011–2013 |

Professional Service

Society for Industrial and Applied Mathematics – Student Chapter <i>Vice President</i>	Florida Atlantic University 2018-2019
Society for Industrial and Applied Mathematics – Student Chapter <i>Secretary</i>	Florida Atlantic University 2017-2018

Reviewer for journals:

PLOS Computational Biology, Frontiers in Computational Biology, Network Neuroscience, Cognitive Processing, Cognitive Systems Research, Biological Cybernetics*, International Journal of Psychophysiology*, PLoS ONE*, Physics of Life Reviews*, Psychological Science*, Journal of Neuroscience Research*. (* assisting Dr. J. A. Scott Kelso)

Reviewer for conference:

Practice & Experience in Advanced Research Computing (PEARC)

Grant reviewer for:

National Science Foundation (Perception, Action, and Cognition program).

Mentoring experience

Among all the undergraduate and graduate students (~ 10) that I have mentored or trained, 80% are persons of color, including 50% black and Latino students, 50% female students. Below are a few primary mentees:

- Rafi Ayub (graduate student, Bio-engineering, Stanford University) 2019–2020
advised him on biophysical network modeling of brain dynamics, assisting Dr. Manish Saggarr.
- Joshua Child (graduate student, Political Sciences, Florida Atlantic University) 2018
advised him for his Directed Independent Study on oscillator models of economic inequality.
- Nadine Akin (postgraduate student, Biological Sciences, Florida Atlantic University) 2017-2018
advised her on the analysis of dynamical behavioral data from a social coordination experiment.
- Ananda Chowdhury (undergraduate student, Engineering, Florida Atlantic University) 2015-2016
advised him on signal processing, and analysis of multiagent interaction data.
- Daniela Herrera (undergraduate student, Neuroscience, Florida Atlantic University) 2015-2016
advised her on behavioral data acquisition for multiagent coordination experiments.

Outreach

- In 2020, I volunteered for Neuromatch 3.0 ([link](#)) as a emcee for five sessions of talks. Neuromatch 3.0 is an online unconference aiming to make neuroscience conferences more open, inclusive, and democratic.
- In 2020, I volunteered for the Neuromatch Academy ([link](#)) to help prepare lecture materials. The Neuromatch Academy is a nonprofit online school to make computational neuroscience more inclusive and diverse.
- In 2019, I joined a nonprofit organization, Women of AI ([link to website](#)), to make programming training more accessible to women interested in data science. I coordinate activities between the organization, Stanford Research Computing Center, and NVIDIA Corporation.
- In 2016, I wrote a popular science article to explain human-machine coordination to Chinese readers, entitled “Human-human coordination vs. human-machine coordination: Does it feel the same?” (in Chinese, [link to article](#))

Computational Techniques

- **Parallel Computing:** CUDA C/C++ for accelerated solutions using NVIDIA GPUs, frequently used with MATLAB mex-function for easy interface. Since 2014, I have employed CUDA-based parallel computing techniques for various applications, including digital signal processing (Wavelet transform, $\sim 100\times$ acceleration), simulation and parameter exploration of differential equations ($\sim 1000\times$ acceleration; used in [Zhang et al. 2019](#)), and computational geometry ($\sim 150\times$ acceleration; used in [Zhang et al. To be submitted](#) and [Zhang et al. 2019, SfN](#)). Specific acceleration factors depend on the intrinsic parallelizability of the problem.
- **Open- & Closed-Loop Data Acquisition:** I have engineered complex experimental apparatuses and software for real-time and/or closed-loop recording and modulation (e.g. [Zhang et al., 2018, in prep-b](#); [Stefanescu et al., in prep-c](#)). My work relies on innovative experimental paradigms, for which proprietary hardware often lacks flexibility or lead to unacceptable latency. To build satisfactory experimental equipment, I developed a system of techniques utilizing open hardware, involving sensor engineering, printed circuit board design, micro-controller programming, and software engineering.

- **Applied Mathematics & Numerical Methods:** My work is tightly connected to the mathematics of Nonlinear Dynamics, Topology, Geometry, and associated numeric methods. By training and by practice, I have developed expertise in ordinary differential equations (**Zhang** et al., 2019, 2016, *in prep-b*; Stefanescu et al., *in prep-c*), partial differential equations (in particular, weak solutions of pattern formation problems with irregular or moving boundaries, using finite element method), stochastic differential equations (**Zhang** et al., *To be submitted*; **Zhang** & Saggat, 2020; **Zhang** et al., 2019, SfN), algebraic topology (**Zhang** et al., 2020, SfN), and computational geometry (**Zhang** et al., *To be submitted*, 2019, SfN).

Other Activities and Achievements

- **Actor/Singer** 2012
In the short musical "The Last Mummer", directed by Wally Zialcita, Philadelphia, PA
- **Internship** 2010-2011
Phase III Clinical Trial Laboratory, Pharmacy Department, Peking University Third Hospital, Beijing, China
- **Director of University Radio Station** 2008-2009
Peking University Health Science Center, Beijing, China
- **Co-founder and Co-director of Student Association of Psychology** 2007-2008
Peking University Health Science Center, Beijing, China
- **Professional Renju Player** 2005-2006
National Champion (2x; China), World Third (1x)
- **The Best Poet Award** 2005
The First Chinese Student Poetry Festival, Sichuan, China
Three award-winning poems were later published in an anthology "Soaring Youth" (2008, People's Literature Publishing House, China)
